

## **Exp No: 10 PIR SENSOR IN PROTEUS USING ARDUINO**

### **AIM:**

To write an Embedded C program for interfacing PIR Sensor using Arduino Uno and Proteus

### **SOFTWARE REQUIRED:**

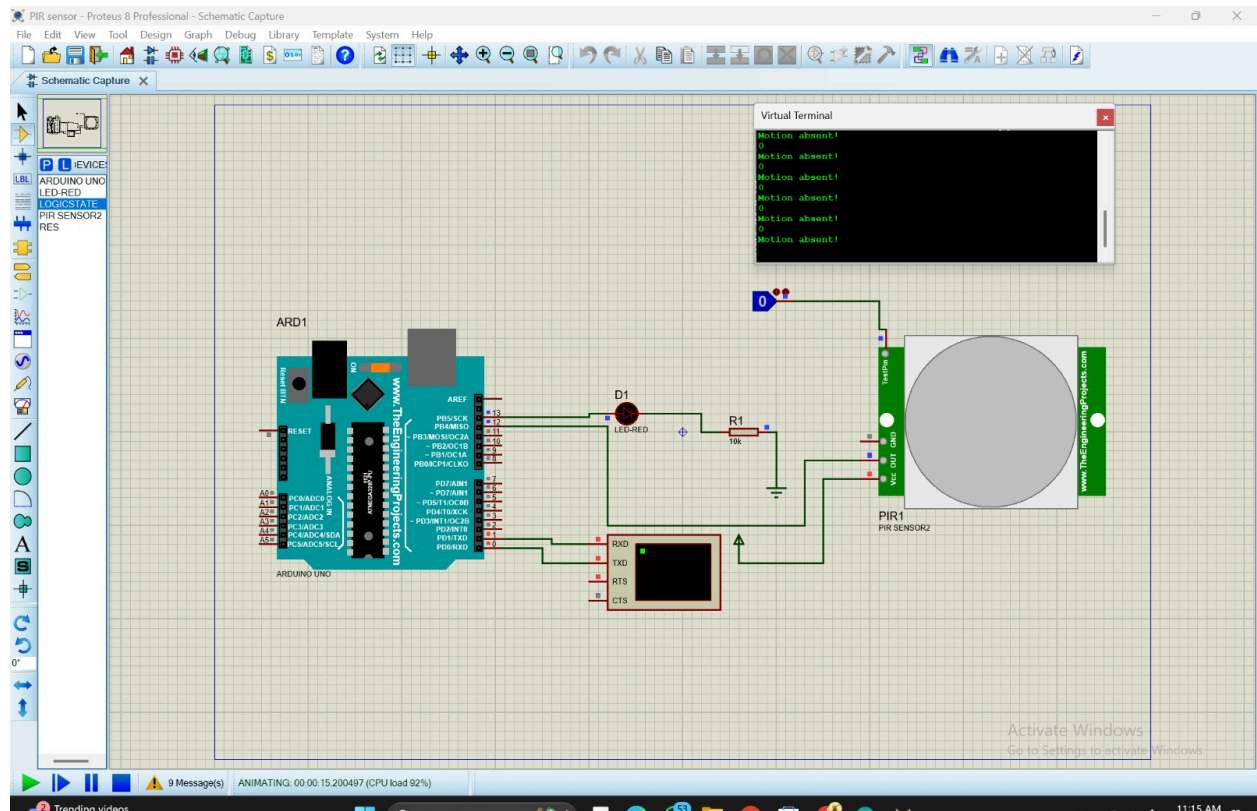

- Proteus 8 software.
- Arduino IDE software

### **PROGRAM:**

```
int Status = 13; // Digital pin D6
int sensor = 12; // Digital pin D7
void setup() {
  Serial.begin(9600);
  pinMode(sensor, INPUT); // declare sensor as input
  pinMode(Status, OUTPUT); // declare LED as output
}
void loop() {
  long state = digitalRead(sensor);
  Serial.println(state);
  if(state == HIGH) {
    digitalWrite (Status, HIGH);

    Serial.println("&quot;Motion detected!&quot;");
    delay(1000);
  }
  else {
    digitalWrite (Status, LOW);
    Serial.println("&quot;Motion absent!&quot;");
    delay(1000);
  }
}
```

## OUTPUT:

## RESULT:

Thus the program has been successfully verified and executed.
